WATER JETTING by GARDNER DENVER (<http://www.waterjetting.com/>)

QF-450 Series Bareshaft Waterjetting Pumps

**Pressures to 20,000 PSI, Flows to
200 GPM, Power to 600 HP**

Gardner Denver's quintuplex pumps are well known for their smooth operation with lower operating costs and infrequent maintenance requirements. They are ideal for continuous duty operations requiring generous flows and are designed for dirty water service. With an efficiency rating of 97% (the highest in the business) and tremendous durability it is no wonder they have become a favorite of plant maintenance contractors everywhere! TWO HEADS ARE BETTER

THAN ONE! The same rugged power frame can be used with either fluid end: the "SB" 10,000 PSI fluid end with flows to 200 GPM, or the mighty "HC" 20,000 PSI fluid end with flows to 88 GPM. Fluid end change-outs are easy and so is maintenance.
