WATER JETTING by GARDNER DENVER (<http://www.waterjetting.com/>)

T-300 Bareshaft Waterjetting Pumps

**Compact, Powerful and Cost
Efficient Water Jetting Pumps -
Pressures to 40,000 PSI, Flows
to 18 GPM, Power to 100 HP**

The Gardner Denver "T Series" triplex bareshaft water jetting pumps have been in production for over 30 years and still going strong. You will find these reliable little pumps on the 100 Series Units. They are an ideal, economical "first pump" for most contractors.

T-300M for 15,000 PSI - The T-300M features the "L" fluid end design, which performs at pressures from 8,000 to 15,000 PSI, and flows from 10.3 to 18.4 GPM. Four different plunger sizes allow this pump to adapt to the specific flow and pressure requirements for each job.

T-300H for 20,000 PSI - The T-300H inline fluid end reliably covers the pressure range from 15,000 to 20,000. Depending on the plunger set installed, the T-300H will deliver flows from 7.7 GPM to 10.3 GPM. All fluid cylinders and valve assemblies are autofrettaged for durability.

T-300UH for 40,000 PSI - The T-300UH inline fluid end reliably covers the pressure range to 40,000 and will deliver flows from 1.3 GPM to 4.0 GPM depending on the RPMs. All fluid cylinders and valve assemblies are autofrettaged for durability.
